## **Ways to Save Money on Energy Costs**

**Cost = \$100 - \$1,000**

### ***YEAR-ROUND***

- Upgrade the insulation in your attic and crawl spaces under your floor.
- Replace an older water heater or refrigerator with a new, highly efficient model.

### ***WINTER***

- For simple, open-masonry fireplaces, install a glass screen, a convective grate, a radiant grate or a fireplace insert. They cut down the loss of warm air through the chimney.

### ***SUMMER***

- Replace older window air conditioners with new, more efficient models.
- Install a vent in the roof to let heat escape from the attic.
